

Assignment 3: User Story

Vardaan Aashish, Young Jun Choi, Yong Joseph McMahan, Charles Tager

<https://github.com/WHYjun/cs411-group11/tree/master/docs>

For our project, we decided to use Python rather than JavaScript, because everyone has the experience with Python. To engage everyone in the project, Python is the best language for the back-end part, because Charles took CS111 only. We had also considered using Django, but ultimately decided upon Flask, because our project is relatively simple to build. Therefore, we built our back-end with Flask, trying to keep minimal in design and building our app as fast as possible. Due to the familiarity of programming language and the simplicity and familiarity of web framework, we decided to use Python and Flask to handle API to build our project.
